

FDSCConnection v1.2

for Microsoft Flight Simulator 2004

By Michael De Feyter - Flight Deck Software
<http://www.flightdecksoftware.com>

Introduction

FDSCConnection is a module that gets loaded by MSFS (Microsoft Flight Simulator) and allows external programs to access the MSFS memory. FDSCConnection also re-maps and/or re-formats part of the MSFS memory to make it look like MSFS98 memory.

Configuration/Installation

Just copy the FDSCConnection.dll in the MSFS modules directory. That's it!

Version History

December 2003 – Version 1.2

- Added support for FS8 & FS7 (FS2002 & FS2000)

November 2003 – Version 1.1

- Added support for a lot of variables above the 0x3000 range
- Some issues with writing values were solved

October 2003 - Version 1.0

September 2003 Version 0.9 (Preview version)
