Account Information

Internet Connection | IPv6 | LISP | DNS server

On this page you enter the data of your Internet connection, and can adjust the connection to special circumstances if needed.

Internet service provider

Select your Internet service provider:

Internet service provider: Other Internet service provider

Name: Telenet

Connect via

Specify how the Internet connection should be established.

- Connection to a DSL line
Select this kind of connection when the FRITZ!Box is connected to your DSL line using the DSL cable. The DSL modem integrated in the FRITZ!Box is used for the Internet connection.
- Connecting to a cable modem (cable connection)
Select this kind of connection if the "LAN 1" port of the FRITZ!Box is connected to a cable modem that establishes the Internet connection.
- External Modem or Router
Select this kind of connection if the "LAN 1" port of the FRITZ!Box is connected to an already existing external modem or router.

Connection Settings

The connection settings are already set to the most frequently used values. You can change these values if needed.

Data Throughput

Enter the speed of your line. These values are required to secure the prioritization of the network devices.

Upstream: 2000 kbit/s

Downstream: 32000 kbit/s

Change connection settings

Check the Internet connection after "Apply" has been clicked

Apply Cancel
